### RESOURCES

There are many good statistics resources and there are some that contain errors. We recommend that you use a book written by a statistician. The following books are written by members of the team here and may be helpful:

**Janet Peacock & Philip Peacock. *The Oxford Handbook of Medical Statistics*. Oxford University Press 2011**

This book covers all main statistical methods including study design, sample size calculations, questionnaire design, multifactorial methods etc

**Janet Peacock & Sally Kerry. *Presenting Medical Statistics from Proposal to Publication*. Oxford University Press 2006**

This book shows how to prepare and present all the necessary statistics from study design through to publication. It shows how to do most common statistical analyses in Stata and SPSS.
